Sparrow Screen Internal

Internal Sparrow Screen is a highly modern form of sun visor. It provides a number of advantages for instance a high UV protection. While being in highly darkened room you can still look out the window. This benefit guarantees sense of privacy and security. Moreover, the internal high quality Screen looks exclusively and is sun resistant.

Sparrow Screen with a guide bar

You can assembly Screen in two variants. The first is mounting Screen in the box and controlling it by electric power. The second option is S-Motion System - the innovative method of rolling the roller blind.

S-Motion System

S-Motion System is a spring mechanism which provides easy and fast use. It helps you to adjust the roller blind by pulling it. If you want to hide the roller blind, click the bottom beam and it rolls to the top. It is the safest solution especially for children – without the chain is less dangerous.

S Motion System can be used in Screens to a maximum size of 2,20m x 2,50m.

The description of mechanism available on:

Fabric Screen

The material used in Screen roller blinds is made of high quality polyester and polyvinyl chloride. Thanks to unique technique of fabric's weave the roller blind has transparent characteristics. We offer Screens with 1%, 3% or 5% translucency provided that 1% is the thickest weave and 5% the least thick. The best solution of this material is 95%-99% UV protection which guarantees maintaining optimal temperature indoor, protects the products not to be insolated, cares about your eyesight and ensures the best visual comfort.

In the Sparrow Screen Roller we use the S2 cassette. This elegant finish of the blind, available in 3 colors. The cassette height is 8.5 cm.
